## *Chapter One*

---

### *Introduction*

*Years ago live were very simple and every body has few appointments to remember. Therefore there was no need for a reminding device. Then, when a live is improved the person has more appointments. Earlier people used paper to remember and control there appointment. Then the computer replaced the paper in many uses like writing notes, appointment, meeting ...etc. After that, new simple devises, like mobile and PDAs...etc, these devises have many uses one of these uses is to remember and control appointment and meeting. But these devises have problem when used for this job because display area is small and just one person can use it. For these reasons we thought about a new devise that solves these problems, this device is called HOME CALENDER.*
