B.Cs. Graduation Project (IS497)
Riyadh, 1426 / 1427 H (2005 / 2006 G)

Report Submitted in Partial Fulfillment of the
B.Cs. Degree in Information Systems

Abstraction

The project is a program that monitors the work of the correspondents of the General Organization for Social Insurance, and that is by recording the information of the tasks that they are asked to do, which includes the leave and return time, and the information about the section that gave the order of the task, and the place to where it is send, this which saves for the establishment better performance far from bad use of the properties, or even loss of time of hours work.

Also the program stores the data of the correspondents and the cars they use. This storage system facilities administration of the correspondents affairs and the cars, which include: the license and insurance date for each correspondent, and the date of purchasing, insurance, and car form, until they do the suitable procedures for better work.
